

✔ Complete File Checklist for Earnings News Trader

📁 Files You Need to Create

Step 1: Run Project Structure Script

```
bash
python setup_project.py
```

This creates all directories and basic files.

Step 2: Copy Content to These Files

File Path	Copy From Artifact	Status
config/config.py	"Configuration File"	
src/database/models.py	"Database Models"	
src/database/connection.py	"Database Connection"	
src/analyzers/llm_interface.py	"Generic LLM Interface"	
src/analyzers/sentiment_analyzer.py	"Updated Sentiment Analyzer"	
src/analyzers/signal_generator.py	"Signal Generator Complete"	
src/collectors/news_collector.py	"News Collector Complete"	
src/notifications/gmail_notifier.py	"Gmail Notifier Complete"	
requirements.txt	"Requirements File"	
.env.template	"Environment Template"	
main.py	"Main Application"	
README.md	"Comprehensive README"	

Step 3: Files Auto-Created by Script

These are created automatically when you run `setup_project.py`:

- ✔ `src/__init__.py` (empty)
- ✔ `src/database/__init__.py` (empty)
- ✔ `src/collectors/__init__.py` (empty)
- ✔ `src/analyzers/__init__.py` (empty)
- ✔ `src/notifications/__init__.py` (empty)
- ✔ `src/utils/__init__.py` (empty)

- ✓ `tests/__init__.py` (empty)
- ✓ `logs/.gitkeep` (empty)
- ✓ `.gitignore`
- ✓ `.vscode/settings.json`
- ✓ `.vscode/launch.json`

Key Features You Get

Multiple AI Providers

- **Claude (Anthropic)** - Best for financial analysis
- **OpenAI GPT** - Popular and reliable
- **Google Gemini** - Free tier available
- **Grok (X AI)** - Latest cutting-edge option
- **Automatic fallback** - Never miss analysis due to API issues

Smart Analysis

- Multi-layer sentiment analysis (AI + traditional methods)
- Confidence scoring (0-1 scale)
- Risk management with position sizing
- Stock fundamentals integration

Professional Reports

- Beautiful HTML emails with charts
- Mobile-responsive design
- Urgent alerts for high-confidence signals
- Analysis breakdown showing all AI scores

Production Ready

- Visual Studio Code integration
- Database storage and logging
- Error handling and notifications
- Modular architecture for easy maintenance

Setup Process

1. Create Project Structure

```
bash

# Download and run the setup script
python setup_project.py
```

2. Copy Module Code

Copy the code from each artifact into the corresponding file listed in the table above.

3. Install Dependencies

```
bash

# Create virtual environment
python -m venv venv

# Activate (Windows)
venv\Scripts\activate
# Activate (Mac/Linux)
source venv/bin/activate

# Install packages
pip install -r requirements.txt

# Download NLTK data
python -c "import nltk; nltk.download('punkt'); nltk.download('brown')"
```

4. Configure Environment

```
bash

# Copy template and edit
cp .env.template .env
# Add your API keys to .env file
```

5. Get API Keys

Required:

- **Alpha Vantage** (FREE): <https://www.alphavantage.co/support/#api-key>
- **Gmail App Password** (FREE): <https://myaccount.google.com/apppasswords>

Choose AI Provider(s):

- **Claude** (~\$3/month): <https://console.anthropic.com/>
- **OpenAI** (~\$2/month): <https://platform.openai.com/api-keys>
- **Gemini** (FREE tier): <https://makersuite.google.com/app/apikey>
- **Grok** (~\$5/month): <https://console.x.ai/>

6. Test & Run

```
bash
```

```
# Test system
```

```
python main.py test
```

```
# Run once
```

```
python main.py run
```

```
# Start scheduler
```

```
python main.py schedule
```

Pro Tips

VS Code Integration

- Press **F5** to run/debug
- Use **Ctrl+Shift+P** → "Tasks" for common operations
- Built-in terminal for commands
- Full IntelliSense and debugging

LLM Provider Management

```
bash
```

```
# Switch providers on the fly
```

```
python main.py switch-llm=claude
```

```
python main.py switch-llm=openai
```

```
python main.py switch-llm=gemini
```

```
python main.py switch-llm=grok
```

Cost Optimization

- Start with **Gemini** (FREE tier) or **OpenAI** (cheapest)

- Use **Claude** for best financial analysis quality
- Enable multiple providers for automatic fallback

Monitoring

```
bash
```

```
# Check system status
```

```
python main.py status
```

```
# View Logs
```

```
tail -f logs/earnings_trader.log
```

```
# Quick urgent scan
```

```
python main.py scan
```

What You'll Get

Daily Email Report Example:

 Daily Earnings Trading Report - 3 Signals

AAPL - LONG  (Confidence: 0.87) [Claude]

Current: \$150.25 (+2.3% 30d) | Position: 3.2%

Reasoning: Strong Q4 beat, raised guidance...

TSLA - SHORT  (Confidence: 0.82) [OpenAI]

Current: \$245.67 (-8.1% 30d) | Position: 2.8%

Reasoning: Missed targets, lowered guidance...

Analysis: TextBlob + VADER + AI = Combined Score

System Capabilities:

- ✓ **24/7 monitoring** of earnings news
- ✓ **Multi-AI analysis** with fallback support
- ✓ **Risk management** with position sizing
- ✓ **Real-time alerts** for urgent signals
- ✓ **Professional reports** in your inbox
- ✓ **Production ready** with full logging

Important Notes

- **Educational purposes only** - not financial advice
- **Do your own research** before making trades
- **Use proper risk management** - never risk more than you can afford
- **Monitor API costs** and set usage limits
- **Keep .env file private** - never commit to version control

🔥 Ready to Start?

Total setup time: ~15 minutes

Monthly cost: \$1-8 (depending on AI provider choice)

Result: Professional trading signals delivered daily!

1. Run `python setup_project.py`
2. Copy the 12 module files from artifacts
3. Get your API keys
4. Run `python main.py test`
5. Start receiving trading signals! 📈

This gives you a professional-grade trading analysis system that would cost thousands from financial data providers, for just a few dollars per month!
